

## Report Scheduler

This change will provide all agencies with a new tool, the Report Scheduler, to automatically receive machine-readable CPARS data. The data available in this tool will be from the Evaluation/Contract Status Report, Evaluation Metrics, and Processing Times Reports. This tool will be available to Agency and Department Point of Contact (APOC & DPOC) users.

## Auto Initiation of FAPIIS Records

This new functionality is to avoid FAPIIS Records from being inputted manually, which can result in erroneous records being created into FAPIIS Records. When the user selects a report type of Termination for Cause, or Termination for Default and then enters a Unique Entity ID (DUNS) it will search FPDS for a Termination for Default or Termination for Cause Report. When the search is returned and the report that you would like to be entered as a FAPIIS Report is pulled from FPDS it will then populate the contract information, including the NAICS, PSC, and Action Date; which will no longer have to be entered manually.

## User Can Now Edit Pending Access Request(s)

Users can now edit or delete their pending access requests after they have been submitted but before they have been approved. To do this the user will click on the same request link in "Access Info", enter their email and confirmation code, which will bring them to their previously submitted application where they can update or delete.
